nature computational science

OPEN FOR SUBMISSIONS

Launching in January 2021, *Nature Computational Science* is a multidisciplinary journal focused on the development and use of computational techniques and mathematical models, and their application to address complex problems across a range of disciplines. The journal will publish both fundamental and applied research, from ground-breaking algorithms, tools and frameworks that notably help to advance scientific research, to methodologies that use computing capabilities in novel ways to find new insights and solve challenging real-world problems.

The journal is open for submissions now and topics covered in the journal include:

- Bioinformatics
- Cheminformatics
- Geoinformatics
- Climate Modeling and Simulation
- Computational Physics and Cosmology
- Applied Math

- Materials Science
- Urban Science and Technology
- Scientific Computing
- Methods, Tools and Platforms for Computational Science
- Visualization and Virtual Reality for Computational Science
